

# Build Recipe BE

1. Create a form in html with the following input names
  - a) recipe\_title
  - b) recipe\_description
  - c) serves\_for
  - d) cooking\_time
2. This html should be served on route - GET '/new'
3. On click of submit button, it should fire a request on route - POST '/new' (Use JS)
4. The POST route should add the details to a MongoDB database collection called 'recipes' and return either of the following json response

```
{success: true, message: 'RECIPE ADDED'}
```

```
{success: false, message: 'ERROR ENCOUNTERED'}
```
5. You can use this link to add at least 5 sample data <http://www.tatasampann.com/recipes>
