

Create an Express app which has 2 mini-apps

1. /web

- / => home page
- /messages => conversations
- /settings => site options

2. /blog

- / => list of blogs
- /authors => list of authors
- /:name => blog article dynamic routing

Note: Content of the pages don't matter. You can put headings on each route.

Make sure you create separate router files for the mini-apps. Do not route from index.js
