

## Assignment for Lecture 4

<https://getbootstrap.com/docs/4.0/examples/blog/#>

For this page, for which you've already written HTML, use all the CSS properties learnt in the class to style the page and get it as close to the design as possible

Visual - Color, Background Color, Font family

Dimensional - Width, height, padding, margin

Alignment - Display - block, inline, inline-block

JS

For the problems given in the previous assignment, use all the language tools we've learnt (variables, data types(primitive and non-primitive), loops) to try and solve the problem (this will be further taken up in the class as well, just give it a shot)
